Survey of State Criminal History Information Systems, 2003

A Criminal Justice Information Policy Report

February 2006, NCJ 210297

U.S. Department of Justice
Bureau of Justice Statistics

Maureen A. Henneberg
Acting Deputy Director

Acknowledgments. This report was prepared by SEARCH, The National Consortium for Justice Information and Statistics, Francis X. Aumand III, Chairman, and Ronald P. Hawley, Executive Director. The project directors and authors of the report were Owen M. Greenspan, Director, Law and Policy, and Eric C. Johnson, Justice Information Services Specialist. Support for the project was provided by Adonica McGarr, Administrative Assistant; Twyla R. Putt, Manager, Corporate Communications; and Jane L. Bassett, Publishing Specialist, Corporate Communications. The Federal project monitor was Dr. Gerard F. Ramker, Chief, Criminal Statistics Improvement Programs, Bureau of Justice Statistics.

Report of work performed under BJS Cooperative Agreement No. 2004-RU-BX-K005, awarded to SEARCH, The National Consortium for Justice Information and Statistics, 7311 Greenhaven Drive, Suite 145, Sacramento, California 95831. Contents of this document do not necessarily reflect the view or policies of the Bureau of Justice Statistics or the U.S. Department of Justice.

List of data tables

1. Overview of State criminal history record systems, December 31, 2003 13
2. Number of subjects (individual offenders) in State criminal history file, 1999, 2001, and 2003 15
3. Number of final dispositions reported to State criminal history repository, 1997, 1999, 2001, and 2003 17
4. Automation of master name index and criminal history file, 1997, 1999, 2001, and 2003 19
5. Data required to be submitted to State criminal history repository, 2003 21
6. Arrest records with fingerprints, 1997, 1999, 2001, and 2003 23
7. Notice to State criminal history repository of release of arrested persons without charging, 1997, 1999, 2001, and 2003 25
8. Completeness of prosecutor and court disposition reporting to State criminal history repository, 1997, 1999, 2001, and 2003 27
9. Policies/practices of State criminal history repository regarding modification of felony convictions, 2003 29
10. Fingerprinting of incarcerated offenders and linkage to records maintained by State criminal history repository, 2003 31
11. Probation and parole data in State criminal history repository, 1997, 1999, 2001, and 2003 33
12. Average number of days to process arrest data submitted to State criminal history repository and current status of backlog, 2003 35
13. Average number of days to process disposition data submitted to State criminal history repository and current status of backlog, 2003 37
14. Average number of days to process correctional admission data submitted to State criminal history repository and current status of backlog, 2003 39
15. Procedures employed by State criminal history repository to encourage complete arrest and disposition reporting, 2003 41
16. Methods used to link disposition information to arrest/charge information on criminal history record, 2003 43
17. Procedure followed when linkage cannot be made between court or correctional information in the criminal history database, 2003 45
- 17a. Procedure followed to obtain missing dispositions, 2003 47
18. Strategies employed by State criminal history repository to ensure accuracy of data in criminal history database, 2003 49
19. Audit activities of State criminal history repository, 1997, 1999, 2001, and 2003 51
20. Data quality audits of State criminal history repository, 2003 53
21. Criminal history records of Interstate Identification Index (III) participants maintained by the State criminal history repository and the Federal Bureau of Investigation (FBI), October 1, 2004 55
22. Fees charged by State criminal history repository for noncriminal justice purposes, 2003 57

Glossary of terms

Automated Fingerprint Identification System (AFIS): An automated system for searching fingerprint files and transmitting fingerprint images. AFIS computer equipment can scan fingerprint impressions (or utilize electronically transmitted fingerprint images) and automatically extract and digitize ridge details and other identifying characteristics in sufficient detail to enable the computer's searching and matching components to distinguish a single fingerprint from thousands or even millions of fingerprints previously scanned and stored in digital form in the computer's memory. The process eliminates the manual searching of fingerprint files and increases the speed and accuracy of ten-print processing (arrest fingerprint cards and noncriminal justice applicant fingerprint cards). AFIS equipment also can be used to identify individuals from "latent" (crime scene) fingerprints, even fragmentary prints of single fingers in some cases. Digital fingerprint images generated by AFIS equipment can be transmitted electronically to remote sites, eliminating the necessity of mailing fingerprint cards and providing remote access to AFIS fingerprint files.

Central Repository: The database (or the agency housing the database) that maintains criminal history records on all State offenders. Records include fingerprint files and files containing identification segments and notations of arrests and dispositions. The central repository is generally responsible for State-level identification of arrestees, and commonly serves as the central control terminal for contact with FBI record systems. Inquiries from local agencies for a national record check (for criminal justice or firearm check purposes) are routed to the FBI via the central repository. Although usually housed in the Department of Public Safety, the central repository is maintained in some States by the State Police or other State agency.

Criminal History Record Information (CHRI) or Criminal History Record Information System:

A record (or the system maintaining such records) that includes individual identifiers and describes an individual's arrests and subsequent dispositions. Criminal history records do not include intelligence or investigative data or sociological data such as drug use history. CHRI systems usually include information on juveniles if they are tried as adults in criminal courts.

Most, however, do not include data describing involvement of an individual in the juvenile justice system. Data in CHRI systems are usually backed by fingerprints of the record subjects to provide positive identification. State legislation varies concerning disclosure of criminal history records for noncriminal justice purposes.

Data Quality: The extent to which criminal history records are complete, accurate, and timely. In addition, accessibility sometimes is considered a data quality factor. The key concern in data quality is the completeness of records and the extent to which records include dispositions as well as arrest and charge information. Other concerns include the timeliness of data reporting to State and Federal repositories, the timeliness of data entry by the repositories, the readability of criminal history records, and the ability to have access to the records when necessary.

Felony or Serious Misdemeanor: The category of offenses for which fingerprints and criminal history information are accepted by the FBI and entered in the Bureau's files, including the III system. Serious misdemeanor is defined to exclude certain minor offenses, such as drunkenness or minor traffic offenses.

Interstate Identification Index (III): An "index-pointer" system for the interstate exchange of criminal history records. Under III, the FBI maintains an identification index to persons arrested for felonies or serious misdemeanors under State or Federal law. The index includes identification information, (such as name, date of birth, race, and sex), FBI Numbers, and State Identification Numbers (SID) from each State holding information about an individual. Search inquiries from criminal justice agencies nationwide are transmitted automatically via State telecommunications networks and the FBI's National Crime Information Center (NCIC) telecommunications lines. Searches are made on the basis of name and other identifiers. The process is entirely automated and takes approximately 5 seconds to complete. If a hit is made against the Index, record requests are made using the SID or FBI Number, and data are automatically retrieved from each repository holding records on the individual and forwarded to the requesting agency. As of March 2005, 47 States participate in III. Responses are provided from FBI files when the State originating the record is not a participant in III.

Participation requires that the State maintain an automated criminal history record system capable of interfacing with the III system and capable of responding automatically to all interstate and Federal/State record requests.

Juvenile Justice Records: Official records of juvenile justice adjudications. Most adult criminal history record systems do not accept such records, which are frequently not supported by fingerprints and which usually are confidential under State law. Pursuant to an order dated July 15, 1992, the FBI now accepts, and will disseminate, juvenile records on the same basis as adult records. States, however, are not required to submit such records to the FBI.

Master Name Index (MNI): A subject identification index maintained by criminal history record repositories that includes names and other identifiers for each person about whom a record is held in the systems. As of 2003, only the U.S. Virgin Islands did not have at least a partially automated MNI; almost all jurisdictions (46 States and Puerto Rico) had fully automated MNIs. The automated name index is the key to rapidly identifying persons who have criminal records for such purposes as presale firearm checks, criminal investigations, or bailsetting. MNIs may include “felony flags,” which indicate whether record subjects have arrests or convictions for felony offenses.

National Crime Information Center (NCIC): An automated database of criminal justice and justice-related records maintained by the FBI. The database includes the “hot files” of wanted and missing persons, stolen vehicles, and identifiable stolen property, including firearms. Access to NCIC files is through central control terminal operators in each State that are connected to NCIC via dedicated telecommunications lines maintained by the FBI. Local agencies and officers on the beat can access the State control terminal via the State law enforcement network. Inquiries are based on name and other nonfingerprint identification. Most criminal history inquiries of the III system are made via the NCIC telecommunications system. NCIC data may be provided only for criminal justice and other specifically authorized purposes. For criminal history searches, this includes criminal justice employment, employment by Federally chartered or insured banking institutions or securities firms, and use by State and local governments for purposes of employment and licensing pursuant to a State statute approved by the U.S. Attorney General. Inquiries regarding presale firearm checks are included as criminal justice uses.

National Crime Prevention and Privacy Compact:

An interstate and Federal/State compact that establishes formal procedures and governance structures for the use of the Interstate Identification Index (III). It is designed to facilitate the exchange of criminal history data among States for noncriminal justice purposes and to eliminate the need for the FBI to maintain duplicate data about State offenders. Under the Compact, the operation of this system is overseen by a policymaking council comprised of Federal and State officials. The key concept underlying the Compact is agreement among all signatory States that all criminal history information (except sealed records) will be provided in response to noncriminal justice requests from another State — regardless of whether the information being requested would be permitted to be disseminated for a similar noncriminal justice purpose within the State holding the data. (That is, the law of the State that is *inquiring* about the data — rather than the law of the State that *originated* the data — governs its use.) In some cases, ratification of the Compact will have the effect of amending existing State legislation governing interstate record dissemination, since most States do not currently authorize dissemination to all of the Federal agencies and out-of-State users authorized under the Compact. At present, noncriminal justice inquiries are handled by the FBI from its files of voluntarily contributed State arrest and disposition records. This requires that the FBI maintain duplicates of State records and generally results in less complete records being provided, since FBI files of State records are not always complete due to reporting deficiencies. The Compact was passed by Congress and signed into law by the President in October 1998. The Compact became effective in April 1999, following ratification by two State legislatures, those being Montana on April 8, 1999, and Georgia on April 28, 1999. Since that time, 21 additional States have entered into the Compact: Nevada (May 1999); Florida (June 1999); Colorado (March 2000); Iowa (April 2000); Connecticut (June 2000); South Carolina (June 2000); Arkansas (February 2001); Kansas (April 2001); Alaska (May 2001); Oklahoma (May 2001); Maine (June 2001); New Jersey (January 2002); Minnesota (March 2002); Arizona (April 2002); Tennessee (May 2003); North Carolina (June 2003); New Hampshire (June 2003); Missouri (July 2003); Ohio (January 2004); Wyoming (February 2005); and Idaho (March 2005).

National Fingerprint File (NFF): A system and procedures designed as a component of the III system, which, when fully implemented, would establish a totally decentralized system for the interstate exchange of criminal history records. The NFF will contain fingerprints of Federal offenders and a single set of fingerprints on State offenders from each State in which an offender has been arrested for a felony or a serious misdemeanor. Under the NFF concept, States forward only the first-arrest fingerprints of an individual to the FBI accompanied by other identification data such as name and date of birth.

Fingerprints for subsequent arrests are not forwarded. Disposition data on the individual also are retained at the State repository and not forwarded to the FBI. Upon receipt of the first-arrest fingerprint cards (or electronic images), the FBI enters the individual's fingerprint impressions in the NFF and enters the person's name and identifiers in the III, together with an FBI Number and a State Identification (SID) Number for each State maintaining a record on the individual. Charge and disposition information on State offenders are maintained only at the State level, and State repositories are required to respond to all authorized record requests concerning these individuals for both criminal justice and noncriminal justice purposes. States have to release all data on record subjects for noncriminal justice inquiries regardless of whether the data could be released for similar purposes within the State. The NFF has been implemented in seven States: Colorado, Florida, Montana, New Jersey, North Carolina, Oklahoma and Oregon.

Positive Identification: Identification of an individual using biometric characteristics that are unique and not subject to alteration. In present usage, the term refers to identification by fingerprints but may also include identification by retinal images, voiceprints, or other techniques. Positive identification is to be distinguished from identification using name, sex, date of birth, or other personal identifiers as shown on a document subject to alteration or counterfeit such as a birth certificate, Social Security card, or driver's license. Because individuals can have identical or similar names, ages, etc., identifications based on such characteristics are not reliable.

Note to readers: This is a report of the results of the Survey of State Criminal History Information Systems. In some of the tables that follow, data from earlier data quality surveys are included. Caution should be used in drawing comparisons between the results of earlier surveys and the survey reported here. Since the last national data quality survey, the U.S. Department of Justice has continued to implement assistance programs dedicated to improving criminal history records. As a result, some States are focusing new or additional resources on the condition of their records and, in many cases, know more about their records today than in the past. A number of State repositories have suffered fiscal cutbacks and have had to shift priorities away from certain criminal history information management tasks. For these and other reasons, trend comparisons may not as accurately reflect the status of the Nation's criminal history records as the current data considered alone.

Introduction

This report is based upon the results from a survey conducted of the administrators of the State criminal history record repositories in May–December 2004. Fifty-three jurisdictions were surveyed, including the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and the U.S. Virgin Islands. Responses were received from all 53 jurisdictions. Throughout this report, the 50 States will be referred to as “States”; the District of Columbia, Puerto Rico, and the Virgin Islands will be referred to as “territories,” consistent with prior surveys; “Nation” refers collectively to both the States and territories.

In addition, the Federal Bureau of Investigation (FBI) was the source for information relating to the number of criminal history records of the States participating in the Interstate Identification Index (III) system that are maintained by the State criminal history repositories and the number of records maintained by the FBI for the States, as of March 1, 2003.

Major findings

Level of automation of master name indexes and criminal history files

Overview of State criminal history record systems, December 31, 2003 (Table 1):

- Forty-nine reporting States, the District of Columbia, and Puerto Rico have automated at least some records in the criminal history record file.

- Twenty-five States (Colorado, Florida, Georgia, Hawaii, Idaho, Indiana, Kentucky, Maine, Maryland, Michigan, Mississippi, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, Oregon, Rhode Island, Tennessee, Texas, Utah, Washington, Wisconsin, and Wyoming) and Puerto Rico have fully automated criminal history files.

Automation of master name index and criminal history file, 2003 (Table 4):

- All 50 reporting States and Puerto Rico have fully or partially automated master name indexes. The Virgin Islands does not maintain a master name index.

- The Virgin Islands has no automated criminal history files.

- Of those States maintaining partially automated criminal history files, when an offender with a prior manual record is arrested, the prior manual record is subsequently automated in 20 States. In four States (California, Delaware, Kansas, and Pennsylvania) and the District of Columbia, only the new information is automated. In Arizona, the new information is added to the manual file.

Level of disposition reporting

Overview of State criminal history record systems, December 31, 2003 (Table 1):

- Eighteen States (California, Connecticut, Delaware, Georgia, Hawaii, Iowa, Maryland, Massachusetts, Michigan, New Hampshire, New York, North Dakota, Ohio, South Dakota, Vermont, Virginia, West Virginia, and Wisconsin) and Puerto Rico, representing approximately 44% of the Nation's population (based on 53 jurisdictions) and 41% of the Nation's criminal history records, report that 80% or more arrests within the last 5 years in the criminal history database have final dispositions recorded.
- A total of 21 States and Puerto Rico, representing approximately 49% of the Nation's population and 47% of the Nation's criminal history records, report that 70% or more arrests within the past 5 years in the criminal history database have final dispositions recorded.
- A total of 27 States, Puerto Rico, and the Virgin Islands, representing approximately 60% of the Nation's population and 58% of the Nation's criminal history records, report that 60% or more arrests within the past 5 years in the criminal history database have final dispositions recorded.
- When arrests older than 5 years are considered, 15 States and Puerto Rico, representing 30% of the Nation's criminal history records, report that 80% or more arrests in the entire criminal history database have final dispositions recorded. Twenty-two States, Puerto Rico, and the Virgin Islands, representing 53%

of the Nation's records, report 70% or more arrests in the entire criminal history database have final dispositions recorded. Twenty-six States, Puerto Rico, and the Virgin Islands, representing 57% of the Nation's criminal history records, report that 60% or more arrests in the entire database have final dispositions recorded.

Number of final dispositions reported to State criminal history repository, 2003 (Table 3):

- Thirty-eight States and the District of Columbia provided data on the number of final dispositions reported to their criminal history repositories, indicating that nearly 6.4 million final dispositions were reported in 2003. The responding jurisdictions represent approximately 71% of the Nation's population.

Level of felony flagging

Overview of State criminal history record systems, December 31, 2003 (Table 1):

- Thirty-two States and Puerto Rico currently flag some or all felony convictions in their criminal history databases.
- Eight States, the District of Columbia, and the Virgin Islands collect sufficient data to permit them to flag at least some previously unflagged convictions.

Timeliness of trial court disposition data

Average number of days to process disposition data submitted to State criminal history repository and current status of backlog, 2003 (Table 13):

- An average of 21 days separates the final court dispositions and receipt of that information by the State criminal history repositories, ranging from 1 day in Colorado, Delaware, Massachusetts, New Jersey, and North Carolina, to 120 days in Illinois.

- An average of 50 days separates the receipt of final trial court dispositions and entry of disposition data into the criminal history databases, ranging from less than 1 day in States where dispositions are entered either directly by the courts or by tape, to 1,000 days in Mississippi. Twenty-three of the 40 reporting jurisdictions enter the data in fewer than 10 days.

- Twenty-seven States, Puerto Rico, and the Virgin Islands indicate having backlogs in entering disposition data into the criminal history database.

Detailed findings

Status of State criminal history files

Number of subjects (individual offenders) in State criminal history file, 2003 (Table 2):

- Over 71 million criminal history records were in the criminal history files of the State criminal history repositories on December 31, 2003. (An individual offender may have records in more than one State.)

- Ninety-three percent of the criminal history records maintained by the State criminal history repositories are automated. Approximately 4.8 million, or 7%, are not automated.

- The Virgin Islands has no automated criminal history files.

Automation of master name index and criminal history file, 2003 (Table 4):

- All 50 States, the District of Columbia, and Puerto Rico have automated at least some records in either the criminal history file or the master name index.
- Forty-six States and Puerto Rico have fully automated master name indexes. The District of Columbia, Maine, New Hampshire, North Dakota, and Tennessee have partially automated master name indexes. The Virgin Islands does not maintain a master name index.
- Of those States maintaining partially automated criminal history files, when an offender with a prior manual record is arrested, the prior manual record is subsequently automated in 20 States. In four States (California, Delaware, Kansas, and Pennsylvania) and the District of Columbia, only the new information is automated. In Arizona, the new information is added to the manual file.

Data required to be submitted to State criminal history repository, 2003 (Table 5):

- Thirty-one States, the District of Columbia, and the Virgin Islands require prosecutors to report to State criminal history repositories their decisions to decline prosecution in criminal cases.
- Forty-six States, the District of Columbia, Puerto Rico, and the Virgin Islands require felony trial courts to report the dispositions of felony cases to the State criminal history repository.

- State prison admission on felony cases must be reported to the State criminal history repository in 34 States and Puerto Rico. State prison release information on felony cases must be reported to the State criminal history repository in 31 States, the District of Columbia, and Puerto Rico.

- Admission data on felons housed in local correctional facilities must be reported to the State criminal history repository in 23 States and the District of Columbia. Release data on felons housed in local correctional facilities must be reported to the State criminal history repository in 16 States.

- The reporting of probation information is mandated in 29 States, the District of Columbia, and Puerto Rico, while 29 States, the District of Columbia, and Puerto Rico require reporting of parole information.

Arrest records with fingerprints, 2003 (Table 6):

- During 2003, almost 10.5 million fingerprint cards and livescan images were submitted to the State criminal history repositories.
- Forty States, representing 92% of the Nation's population, have records that are 99-100% supported. A total of 42 States, or an additional 2 States, and the District of Columbia, representing 94% of the Nation's population, have records that are at least 90% fingerprint-supported. In 6 States and the Virgin Islands, some of the arrests in the criminal history files, ranging from 25% to 85%, are fingerprint-supported. In Massachusetts and Puerto Rico, there are no fingerprint-supported criminal history records.

Completeness of data in State criminal history repository

Notice to State criminal history repository of release of arrested persons without charging, 2003 (Table 7):

- Twenty-five States and Puerto Rico require law enforcement agencies to notify the State criminal history repository when an arrested person is released without formal charging but after the fingerprints have been submitted to the repository.

Disposition data

Completeness of prosecutor and court disposition reporting to State criminal history repository, 2003 (Table 8):

- Nineteen States (California, Colorado, Connecticut, Delaware, Georgia, Idaho, Illinois, Maryland, Massachusetts, Minnesota, Nebraska, New Jersey, New York, Rhode Island, South Carolina, South Dakota, Utah, Vermont, and West Virginia), Puerto Rico, and the Virgin Islands report that criminal history repositories receive final felony trial court dispositions for 80% or more of the cases.

Eight States (Colorado, Connecticut, Maryland, Massachusetts, New Jersey, Rhode Island, South Carolina, and Utah) estimate that they receive notice in 100% of the cases.

A. A total of 22 States, or 3 additional States (Hawaii, Montana, and Virginia), Puerto Rico, and the Virgin Islands report that dispositions in 70% or more of the cases are received by the State criminal history repositories.

B. A total of 24 States, or 2 additional States (Arizona and Arkansas), Puerto Rico, and the Virgin Islands report that dispositions in at least 57% of the cases in their States are received by the State criminal history repositories.

- Of the respondents indicating that there is a legal requirement for prosecutors to notify the State criminal history record repository of declinations to prosecute, 4 States (California, Delaware, Maryland, and New Jersey) and the District of Columbia estimate that notice is received in 100% of the cases.

- Fourteen States, the District of Columbia, and Puerto Rico were able to estimate the number of prosecutor declinations received. The number of declinations received range from 147 in Puerto Rico to 162,300 in California.

Policies/practices of State criminal history repository regarding modification of felony convictions, 2003 (Table 9):

- Expungements: Twenty-six States, the District of Columbia, Puerto Rico, and the Virgin Islands have statutes that provide for the expungement of felony convictions. In 10 States, Puerto Rico, and the Virgin Islands, the record is destroyed by the State criminal history repository. In 12 States and the District of Columbia, the record is retained with the action noted on the record. Three States seal the record. In Minnesota, although State law does not provide for destroying conviction data, the State does get orders issued pursuant to the inherent authority of the courts. In Mississippi, records that are expunged are deleted from the database; however, the State criminal history repository is authorized to maintain an internal record of action in some cases.

- Setting aside of convictions: Thirty-six States, the District of Columbia, and Puerto Rico have statutes that provide for setting aside felony convictions. In 33 States, the District of Columbia, and Puerto Rico, the record is retained with the action noted. In 2 States, South Dakota and Tennessee, the record is destroyed. In Nevada, the record is sealed.

- Pardons: All reporting jurisdictions (50 States, the District of Columbia, Puerto Rico, and the Virgin Islands) have statutes that provide for the granting of a pardon. In 46 States and the District of Columbia, the criminal history record is retained with the action noted. In 3 States, Puerto Rico, and the Virgin Islands, the record is destroyed. In Maine, the record is treated as a nonconviction.

- Restoration of civil rights: Forty-three States and the District of Columbia have legal provisions for the restoration of a convicted felon's civil rights. In the majority of those jurisdictions (37 States and the District of Columbia), the record is retained with the action noted. In Vermont and Puerto Rico, the record is destroyed. In Alaska and Maryland, although there are legal provisions for restoration of civil rights, such actions are not reported to the State criminal history repository. In New Hampshire, the record is sealed with no action noted.

Correctional data

Fingerprinting of incarcerated offenders and linkage to records maintained by State criminal history repository, 2003 (Table 10):

- In 38 States there is a legal requirement (State statute or State administrative regulation having the force of law) that the State prison system must fingerprint admitted prisoners and send the fingerprints to the State criminal history repository.

- A total of 22 States have the same legal requirement for reporting by local jails.

- In jurisdictions where State correctional facilities are legally required to report information or the information is reported voluntarily, the majority (31 States) reported that 100% of the admissions are reported to the repository. Two States estimate a reporting rate of less than 100%, ranging from 10% in New Hampshire to 30% in Kansas.

- For reporting from local jails, where required by law or completed voluntarily, 10 States report that 95% or more of the admissions are reported to the State repositories. Eight of those States reported that 100% of the admissions are reported to the repository.

- In 44 States fingerprints received from State and local correctional facilities are processed by the State criminal history record repository to establish positive identification of incarcerated offenders and to ensure that correctional information is linked to the proper records.

Probation and parole data in State criminal history repository, 2003 (Table 11):

- Of the 15 responding jurisdictions where reporting of probation data is legally required or voluntarily reported, 12 estimate that at least 95% of the cases in which probation is ordered are reported to the State criminal history repository by the probation authority. Nine of those states reported that 100% of the cases are reported to the State criminal history repository. Minnesota reports that in at least 75% of the cases, the State criminal history repository receives probation information. Two States (Nebraska and Oklahoma) report that information is received on less than 40% of the cases.

- Of the 16 responding States where reporting of parole data is legally required or voluntarily reported, 15 estimate that parole information is reported in 95% or more of the cases. Oklahoma estimated that parole information is reported in 20% of its cases to the State criminal history repository.

Timeliness of data in State criminal history repository

—Arrests

Average number of days to process arrest data submitted to State criminal history repository and current status of backlog, 2003 (Table 12):

- Based on the responses of 46 jurisdictions, the average number of days between arrest and receipt of arrest data and fingerprints by the State criminal repositories is 14, ranging from 1 day or less in 9 States and the District of Columbia to 105 days in Mississippi. The majority (32) receive the data in 10 days or less.

- Based on the responses of 45 jurisdictions, the average number of days between receipt of fingerprints by the State criminal history repository and entry into the master name index by the State criminal history repositories is 18.1, ranging from 0 days in Delaware to 210 days in Connecticut. The majority (34) of jurisdictions enter the data in 10 days or less.

- Based on the responses of 48 jurisdictions, the average number of days between receipt of fingerprints by the State criminal history repository and entry of arrest data into the criminal history databases is 18.3, ranging from 0 days in Delaware to 210 days in Connecticut. The majority (32) of jurisdictions enter the data in 10 days or less.

- Nineteen States indicate that they have, or had at the time of the survey, backlogs in entering arrest data into the criminal history database. The number of person-days to clear the backlogs range from 2 days in Maine to clear an estimated 100 unprocessed or partially processed fingerprint cards, to over 1,100 days in Connecticut to clear an estimated 112,700 unprocessed or partially processed fingerprint cards.

—Disposition data

Average number of days to process disposition data submitted to State criminal history repository and current status of backlog, 2003 (Table 13):

- An average of 21.5 days separates the final court dispositions and receipt of that information by the State criminal history repositories, ranging from 0 days in Maine and New York to 80 days in Illinois.

- An average of 50.2 days separates the receipt of final trial court dispositions and entry of disposition data into the criminal history databases, ranging from 0 days in New York and Oregon to 1,000 days in Mississippi.

- Twenty-seven States, Puerto Rico, and the Virgin Islands indicate having backlogs in entering disposition data into the criminal history database, ranging from 7 days to clear a backlog of 500 dispositions in New Hampshire, to over 3,800 days to clear 382,600 dispositions in Kansas.

—Admission to correctional facilities

Average number of days to process correctional admission data submitted to State criminal history repository and current status of backlog, 2003 (Table 14):

- Based on 32 applicable jurisdictions providing responses, the average number of days between the admission of offenders to State correctional facilities and receipt of the information by the State criminal history repository is 13, ranging from 1 day or less in 14 States, to 90 days in Kentucky.

- Based on the responses of 21 applicable States, the average number of days between the release of offenders from State correctional facilities and receipt of the information by the State criminal history repository is 16, ranging from 1 day or less in 7 States, to 60 days in Iowa.

- The responses from 31 applicable jurisdictions indicate that the average number of days between the receipt of correctional information and entry by the State criminal history repository into the criminal history database is 14.5, ranging from 1 day or less in 16 jurisdictions, to 730 days in Missouri.

- Twelve jurisdictions indicate that they have or had backlogs in entering the correctional information into the criminal history databases. The number of person-days to clear the backlogs range from 2 in California to clear an estimated 17,700 unprocessed or partially processed custody-supervision forms, to 730 person-days in Missouri to clear an estimated 100,000 unprocessed or partially processed custody-supervision forms.

Procedures to improve data quality

Procedures employed by State criminal history repository to encourage complete arrest and disposition reporting, 2003 (Table 15):

- The method most used to encourage complete arrest and disposition reporting is telephone calls, conducted by 44 States, the District of Columbia, Puerto Rico, and the Virgin Islands.
- Twenty-nine States and Puerto Rico generate lists of arrests with missing dispositions as a means of monitoring disposition reporting. Twenty-two of those States and Puerto Rico use the lists to provide notice to criminal justice agencies in order to obtain the missing dispositions.
- Thirty-one States and the District of Columbia generate form letters to encourage complete arrest and disposition reporting.

- Thirty States, the District of Columbia, and Puerto Rico report using field visits to encourage complete arrest and disposition reporting.

- Other jurisdictions report using such methods as audits, training, and electronic contact as methods to encourage complete arrest and disposition reporting.

Linking of arrests and dispositions

Methods to link disposition information to arrest/charge information on criminal history record, 2003 (Table 16):

- Thirty-eight States, the District of Columbia, Puerto Rico, and the Virgin Islands utilize methods for linking disposition information and arrest/charge information, which also permit the linking of dispositions to particular charges and/or specific counts.

- All responding jurisdictions report using at least one method for linking disposition information and arrest/charge information on criminal history records, and nearly every jurisdiction indicates multiple mechanisms to ensure linkage:

- Thirty-five States and the District of Columbia employ a unique tracking number for the individual subject.

- Forty States, the District of Columbia, and Puerto Rico use a unique arrest event identifier.

- Twenty-one States, the District of Columbia, and the Virgin Islands utilize a unique charge identifier.

- Thirty-seven States, the District of Columbia, and the Virgin Islands use the arrest date to link disposition data.

- Thirty-five States, the District of Columbia, Puerto Rico, and the Virgin Islands use the subject's name as a method to link disposition information to arrest information.

- Twenty-four States and Puerto Rico report using the reporting agency's case number.

- Individual jurisdictions also report using other methods, such as the originating agency (ORI) number, the Social Security number, date of birth, and other unique combinations of numbers.

Procedure followed when linkage cannot be made between court or correctional information in the criminal history database, 2003 (Table 17):

- Forty-seven jurisdictions report that they sometimes receive final court dispositions that cannot be linked to arrest information in the criminal history database.

The jurisdictions vary in the number of court dispositions that cannot be linked to arrest cycles in the criminal database from 24 in Wyoming to 148,400 in Texas. Four States (Colorado, Connecticut, Delaware, and Vermont,) report that all final court dispositions can be linked to the arrest cycle in the criminal history database.

- Thirty jurisdictions report that they sometimes receive correctional information that cannot be linked to arrest information in the criminal history record database. The number of correctional dispositions that cannot be linked to arrest cycles in the criminal history database range from 19,200 in Minnesota to 58,300 in Texas.

- Thirty-four jurisdictions report that they sometimes receive prosecutor dispositions that cannot be linked to arrest information in the criminal history record database. The number of prosecutor dispositions that cannot be linked to arrest cycles in the criminal history database range from 400 in West Virginia to 71,000 in Indiana.

- The jurisdictions use a variety of procedures when a linkage cannot be established. Four States create “dummy” arrest segments from court disposition records; three States create “dummy” segments from correctional data. Seven States and the Virgin Islands enter court information into the database without any linkage to a prior arrest, and 16 States enter correctional information into the database without any linkage to a prior court disposition. Twenty-three States, Puerto Rico, and the Virgin Islands do not enter the unlinked court information. Ten States, the District of Columbia, and Puerto Rico do not enter unlinked correctional information. Fifteen jurisdictions utilize other procedures, such as returning the information to the originating or contributing agency or using temporary or pending files until a match can be established.

Missing dispositions

Procedure(s) followed to obtain missing dispositions, 2003 (Table 17a):

- Two States (Maryland and New Jersey) report that they do an automated inquiry to the prosecutor upon a predetermined period of time. Ten States report that they do an automated inquiry to a specific court or statewide court administrator upon a predetermined period of time.

- Nevada reports that an automated inquiry to the prosecutor upon a criminal history query is done to obtain missing dispositions. Eleven States report that they do an automated inquiry to a specific court or statewide court administrator system upon a criminal history query.

- Thirty-one States, Puerto Rico, and the Virgin Islands report that a manual inquiry to the prosecutor upon a criminal history query is done to obtain missing dispositions. Thirty-eight States, the District of Columbia, and the Virgin Islands report that a manual inquiry is done to a specific court or statewide court administrator upon a criminal history query.

Other data quality procedures

Strategies employed by State criminal history repository to ensure accuracy of data in criminal history database, 2003 (Table 18):

- To prevent the entry and storage of inaccurate data and to detect and correct inaccurate entries in the criminal history database, all 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands use at least one strategy to circumvent this problem.

- The most-frequently utilized strategy is the use of computer edit and verification programs, which is employed by 43 States, the District of Columbia, and Puerto Rico.

- Forty-two States, the District of Columbia, and the Virgin Islands manually review incoming source documents or reports.

- Twenty-nine States and the Virgin Islands perform manual double-checking before data entry. Manual review of criminal record transcripts before dissemination is performed in 26 States, Puerto Rico, and the Virgin Islands.

- Twenty-six States and the District of Columbia perform random sample comparisons of the State criminal history files with stored documents.

- Twenty-two States, Puerto Rico, and the Virgin Islands generate error lists that are returned to the reporting agencies.

- Twenty States and Puerto Rico use various strategies, such as audits and contacting contributing agencies for more information.

Audits

Audit activities of State criminal history repository, 2003 (Table 19):

- Forty-nine States and Puerto Rico maintain transaction logs to provide an audit trail of all inquiries, responses, and record updates or modifications.

- More than half of the repositories, a total of 35 States and Puerto Rico, report that the State criminal history repository or some other agency performed random sample audits of user agencies to ensure accuracy and completeness of repository records and to ensure that the agencies comply with applicable laws and regulations.

Data quality audits of State criminal history repository, 2003 (Table 20):

- During the 5 years before the survey, an audit of the State criminal history repository's database (other than ongoing systematic sampling) was conducted in 33 jurisdictions to determine the level of accuracy and completeness of the criminal history file.
- Of the jurisdictions where audits were performed, 25 jurisdictions report that another agency conducted the audit; the repository conducted its own audit in 6 jurisdictions; and 2 States indicated that auditing was conducted by both an outside agency and the repository.
- Twenty jurisdictions in 2003 reported that no data quality audit had been conducted during the previous 5 years, and 22 reported that they are not planning to audit in the coming 3 years.
- In 27 jurisdictions where audits were conducted, changes were made as a result of the audits to improve the data quality of records.
- Twenty-seven States, the District of Columbia, and Puerto Rico had data quality audits planned or scheduled for sometime in the next 3 years.
- Forty-nine States and Puerto Rico had initiatives underway at the repository or contributing agencies to improve data quality. Initiatives included audit activities (33); automation changes (46); disposition or arrest reporting enhancements (46); felony flagging (14); fingerprint enhancements (38); agency interfaces (34); legislation (13); plan development (32); establishment of task forces (21); implementation of tracking numbers (23); and training (44).

Criminal history records of Interstate Identification Index (III) participants maintained by the State criminal history repository and the Federal Bureau of Investigation, 2003 (Table 21):

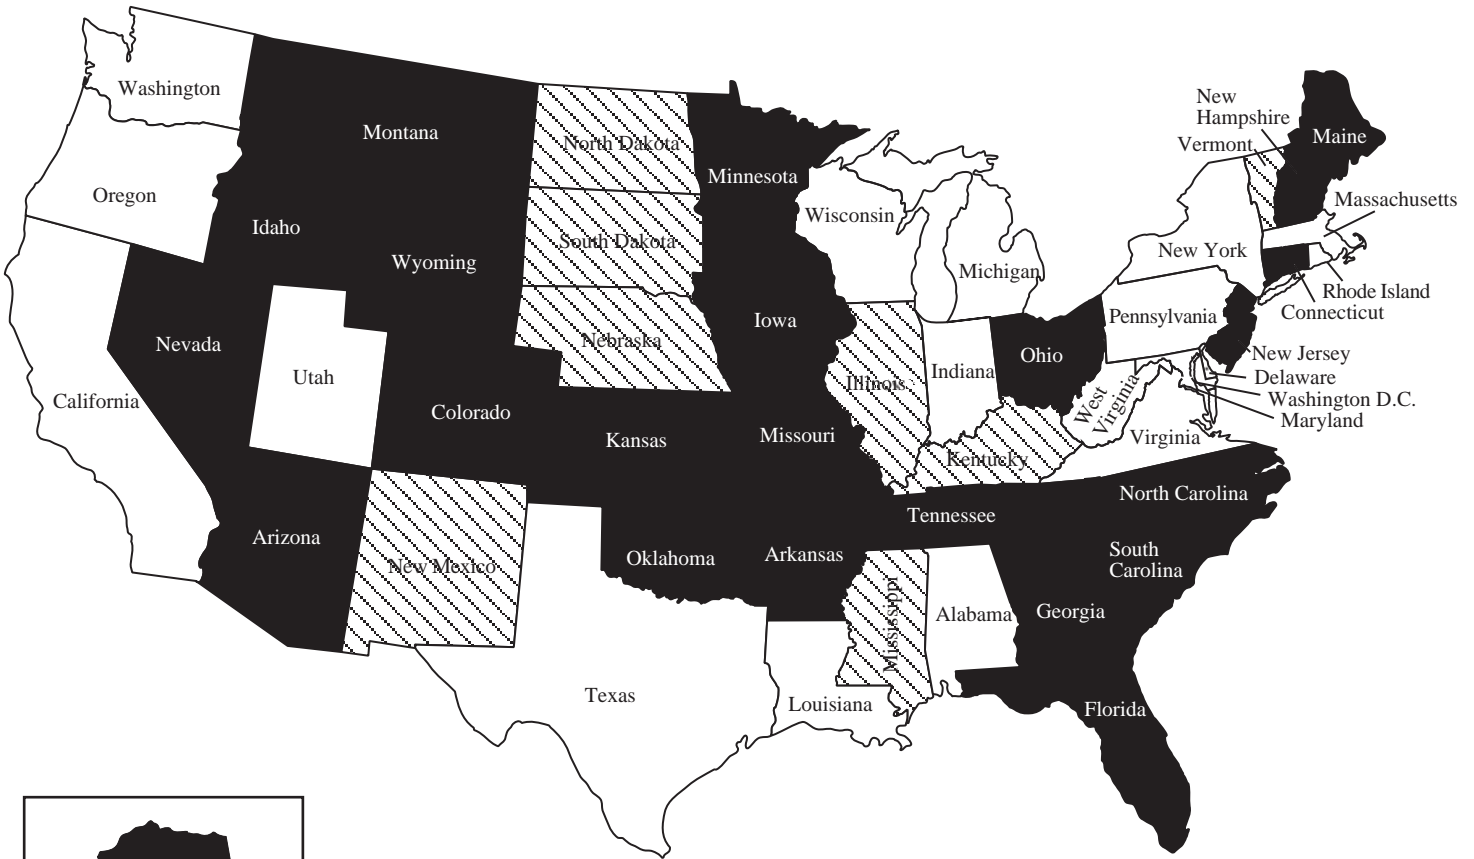

- As of December 31, 2003, over 31 million III records are indexed with the State's identification (SID) pointers. Approximately 19 million records are maintained by the FBI for the States.

Fees charged by State criminal history repository for noncriminal justice purposes, 2003 (Table 22):

- Almost all of the responding States (49), the District of Columbia, and the Virgin Islands currently charge fees for conducting criminal history record searches for noncriminal justice requesters. Louisiana and Puerto Rico do not charge fees.
- Fees for fingerprint-supported searches range from \$5 in Arizona and Mississippi up to \$52 in California. In some cases, California does not charge a fee for the search.
- Fees for name searches range from \$2 in Wisconsin for nonprofit organizations to \$30 in North Dakota. Eleven States (Arizona, California, Delaware, Georgia, Maryland, Mississippi, New York, Ohio, South Dakota, West Virginia, and Wyoming) do not conduct name searches for noncriminal justice purposes.
- Twenty States (Alaska, Arkansas, Connecticut, Delaware, Florida, Iowa, Kansas, Michigan, Minnesota, Nevada, New Hampshire, New Jersey, Ohio, Oregon, South Carolina, Tennessee, Vermont, Virginia, West Virginia, and Wyoming) charge different fees for volunteer searches.

Data tables

Explanatory notes for Table 1

Percentages and numbers are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. The "number of subjects (individual offenders)" in the State criminal history file for each year applies only to the criminal history file, including partially automated files and does *not* include release by police without charging, declinations to proceed by prosecutor, or final trial court dispositions.

± The total figure does not include Louisiana, Rhode Island, and the Virgin Islands, for which no data were submitted.

... Not available.

*The flag is set:

** At both arrest and conviction.

= When conviction information is entered.

== When arrest information is entered.

^a Additional disposition information is available in nonautomated records linked to a database and available to complete the record if dissemination is requested.

^b Not currently setting at this time.

^c Montana implemented its new criminal history record system in December 1999. All legacy data were dumped into the new system; however Montana is manually "converting" the information. The 30% indicates how many of the records have actually been converted, not the number that have disposition information.

^d The Rhode Island Criminal History (RICH) System is automated as far as 90% of the police departments forwarding fingerprint cards/arrest information via a livescan. Currently, the arrest information is manually entered into the RICH System. The RI Attorney General's Office hopes to go live with the Connecticut IAFIS System, which will automate all arrest information.

^e Arraignment and conviction.

Table 1: Overview of State criminal history record systems, December 31, 2003

State	Criminal history records automated in whole or in part	Number of subjects (individual offenders) in State criminal history file [±]		Percent of arrests in database that have final dispositions recorded—		System flags subjects with felony convictions*	System has information to identify unflagged felony conviction
		Total	Automated	All arrests	Arrests within past 5 years		
Total		71,028,500	66,232,100

Explanatory notes for Table 2

Except for Puerto Rico, for which additional data were submitted, the data in the columns for 1999 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Systems, 1999* (October 2000), Table 2. The data in the columns for 2001 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 2001* (September 2003), Table 2.

Percentages and numbers are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. The "number of subjects (individual offenders)" in the State criminal history file for each year applies only to the criminal history file, including partially automated files and does *not* include the master name index. The total figure for 2003 does not include Louisiana, Rhode Island, and the Virgin Islands, for which no data were submitted.

... Not available.

^a The decrease is due to estimates of the manual file in previous years. A method of accurately counting manual records has been developed, resulting a determination that there are, in fact, only 10,700 manual records.

^b The decrease in the total number of records is the result of a more accurate computer-generated number, as well as file maintenance, deletion of subjects over 80 years of age, and deletion of duplicate records.

^c The 1999 figure included traffic violations; the 2001 figure does not; therefore, the total appears to be a decrease.

^d As of January 21, 2000.

^e The decrease in the total number of records is due to updating the file by the deletion of "wants," records of individuals presumed dead, records with multiple state identification numbers, and incomplete records.

^f The decrease is due to counting all *arrests* for the 1999 response; not all arrests end up on individual rap sheets.

^g The size of the file remained constant from 1999 due to purge criteria being implemented that offset the number of new arrests.

^h The decrease is due to civilian files being inadvertently included in the 1999 figure. The 2001 figure represents only criminal offenders.

Table 2: Number of subjects (individual offenders) in State criminal history file, 1999, 2001, and 2003

State	Number of subjects in <u>manual and automated files</u>		Number of subjects in manual and <u>automated files, 2003</u>			<u>Percent of automated files</u>			<u>Percent change in total files</u>

Explanatory notes for Table 3

The notes below expand on the data in Table 3. The explanatory information was provided by the respective respondent.

Note: Final dispositions include release by police without charging, declination to proceed by prosecutor, or final trial court disposition. Percentages and numbers reported are results of estimates. Numbers have been rounded to the nearest whole number. Except for Connecticut and Puerto Rico, for which corrected data were submitted, the data for 1997 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1997* (April 1999), Table 3. Except for Georgia, Nebraska, and Puerto Rico, for which corrected data were submitted, the data for 1999 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1999* (October 2000), Table 3. The data in the columns for 2001 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 2001* (September 2003), Table 3.

... Not available.

^a Figure represents felonies and misdemeanors.

^b Figure includes all charge levels for calendar year 2001. The number of final dispositions has increased due to several factors, including: the majority of final dispositions are being regularly reported to the Florida Department of Law Enforcement in an automated fashion by individual counties, and several internal programming enhancements now enable a higher percentage of submitted dispositions to be matched electronically without need for manual intervention.

^c The decrease from 1999 in the number of dispositions is due to the testing of an electronic interface and tracking drawbacks in 2001, during which a number of dispositions could not be obtained.

^d Kentucky no longer enters dispositions for the courts and prosecutors; they are entered by tape, so the repository does not have a count to include in the dispositions figure.

^e The Bureau of Identification previously was unable to process incoming dispositions due to lack of personnel. In 1998, disposition reporting was given priority, and since that time, many agencies have increased disposition reporting.

^f The State of Maine is currently working on building an interface between the CHRI and the District Attorneys IT system so that the CHRI will electronically receive prosecutors' transactions as they occur.

^g Massachusetts does not distinguish entries of a final disposition from any other charge to a record.

^h The figure represents 190,600 processed dispositions and 50,000 backlogged dispositions.

ⁱ The figure represents court dispositions. Although prosecutor declinations are reported, the number is unknown. The number of dispositions decreased from 1997 to 1999 because in 1997, the State repository was working on a National Criminal History Improvement Project (NCHIP) to resolve missing dispositions. The count provided in 1997 includes the dispositions provided in this project during that year.

^j The increase reflects extra efforts expended to electronically receive dispositions for prior years.

^k Court dispositions only.

^l Final charge dispositions entered in 1997.

^m This was the result of a disposition backlog and an overtime project to assist in reducing the backlog.

ⁿ The decrease from 1999 in dispositions is reflective of the larger metropolitan area decline in reporting and the central repository electronic integration project that is currently being implemented with the courts case management system.

^o During 1997, the Las Vegas Metropolitan Police Department processed a backlog of dispositions, which were then passed on the State repository for entry. This accounts for the larger number of dispositions received in 1997 than in 1999.

^p The figure represents final charge dispositions.

^q The reason for the decrease from 1999 is that in 1999, a backlog from previous years was processed.

^r This figure includes only dispositions received in 2001; the figure for 1999 includes dispositions received for the period of 1995-1999.

^s In fiscal year 1997, in order to alleviate a backlog of current work, four additional temporary employees were hired to process delinquent dispositions; therefore, the number of dispositions in 1997 is greater than the number reported for 1999.

^t The reason for the increase in 2001 is that five full-time staff were hired to research missing dispositions.

^u In 1997, the State repository worked with the Seattle Municipal Court (King County) to obtain disposition reports by downloading the information from the court's database. The initial download was 65,000 disposition reports. As a result, the number of dispositions received during 1999 shows a decrease from the 1997 figure.

^v Represents counts of 1999 *arrest* dispositions posted to the computerized criminal history. Previous years are counts of *charge* dispositions.

^w During the latter part of 1998 and 1999, personnel turnover and increased civil card processing created a backlog that resulted in reduced disposition form collections.

^x The decrease is due to lack of staff and backlog.

Table 3: Number of final dispositions reported to State criminal history repository, 1997, 1999, 2001, and 2003

State	Number of dispositions				Percent change		
	1997	1999	2001	2003	1997-99	1999-2001	2001-03

Explanatory notes for Table 4

The notes below expand on the data in Table 4. The information was provided by the respective respondent.

Note: Except for Puerto Rico and South Carolina, for which corrected data were submitted, the data for 1997 were taken from Bureau Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1997* (April 1999), Table 4. Except for Puerto Rico, for which additional information was submitted, the data in the columns for 1999 were taken from Bureau Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1999* (October 2000). The data in the columns for 2001 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 2001* (September 2003), Table 4.

Y Yes

N No

P Partial

... Not available.

NA Not applicable.

* Jurisdiction is fully manual.

^a Only the new information is automated, while the manual, older records are being automated upon request.

^b The new information is added to the manual file.

^c Only the new information is automated.

^d If a manual record contains seven or more arrests, only the new information is automated, thus creating a "hybrid record" (part manual/part automated). If the manual record contains fewer than seven arrests, the entire record is subsequently automated.

^e Traffic and misdemeanor cases are not included in the master name index (MNI).

^f Fingerprint-supported subjects are in an automated MNI; prior records are completely manual.

^g The Maine State Bureau of Identification (SBI) implemented its Criminal History Record Information (CHRI) system August 28, 2002. All names and dates of birth are indexed for all records within the CHRI. The total number for the database is 363,179; however, only 31.6% of this total number have been converted from "Index" format (name and date of birth) to "Contents" format. "Contents" means all associated criminal history record information has been data entered into the CHRI and these records are fully automated and available electronically 24 hours a day, 7 days a week.

^h If arrest is fingerprint-supported.

ⁱ At this time the priorities for SBI are to build records based upon inquiry, first-time arrests, and updates to already built records. A prior manual record only gets built, based on the priorities given, if there is an inquiry against the individual. When an individual is "brand new" to the repository, the automated record building is initiated when SBI receives either an arrest fingerprint card or a Uniform Summons and Complaint (USAC).

^j Although the criminal history database that is utilized in Nebraska is fully automated, there are approximately 6,000 partially automated records that are in the process of being deleted.

^k Old records still need to be automated.

^l Only those subjects with dates of birth of 1940 or later are included in the automated MNI.

^m Subjects with DOB 1940 or later are in the MNI.

ⁿ Currently automating all records.

^o If a subject's prior fingerprint record was of poor quality, it would not have been automated; upon receipt of AFIS (Automated Fingerprint Identification System)-quality fingerprints, the record will be automated.

^p 169,800 nonautomated records consist of older misdemeanors only.

Table 4: Automation of master name index and criminal history file, 1997, 1999, 2001, and 2003

Explanatory notes for Table 5

The notes below expand on the data in Table 5. The explanatory information was provided by the respective respondent.

* Admission information only.

** Release information only.

... Not available.

^a Montana Code Annotated specifies that the arresting agency is required to notify the repository when charges are not filed. The State does not govern the prosecutors, therefore statistics are not available for this question. The figures identified in question 12 best describe charges not being filed.

^b The New York State Department of Corrections submits correctional data online.

^c Dispositions are reported by the Administrative Office of the Pennsylvania Courts (AOPC) with no separation of felony versus other grades of offenses.

Table 5: Data required to be submitted to State criminal history repository, 2003

Explanatory notes for Table 6

The notes below expand on the data in Table 6. The explanatory information was provided by the respective respondent.

Note: Numbers and percentages reported are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. Except for Puerto Rico, for which corrected data were submitted, the data in the columns for 1997 were taken from *Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1997* (April 1999), Table 6. Except for Puerto Rico and South Carolina, for which corrected data were submitted, the data in the columns for 1999 were taken from *Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1999* (October 2000), Table 6. The data in the columns for 2001 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 2001* (September 2003), Table 6.

... Not available.

NA Not applicable.

^a Figure is for fiscal year 1999.

^b Arrests are reported by terminal, and arrest information is entered from final dispositions, which are not fingerprinted-supported.

^c Arrests are reported by terminal, and arrest information is entered from final dispositions and criminal summonses, which are not fingerprint-supported.

^d Number represents a decrease in arrests for the time period.

^e Arrest information is entered from final dispositions, which are not fingerprint-supported.

^f Some arrest information is entered from final dispositions, which are not fingerprint-supported.

^g Arrest information is entered from criminal summonses, which are not fingerprint-supported.

^h The number reflects a decrease in the number of arrests made during the time period.

ⁱ Arrests are reported by terminal; State law and/or policy does not require arrest information be supported by fingerprints. Arrest information is entered from final dispositions and criminal summonses, which are not fingerprint-supported.

^j State law and/or policy does not require arrest information to be supported by fingerprints.

^k Figure includes adult and juvenile records.

^l In 1997 and 1999, the counts were taken based on statistics available on the State's Automated Fingerprint Identification System (AFIS), and an estimate of repeater work for AFIS displays at the workstation. For 2001, the actual arrest count from the criminal history repository was used in conjunction with the number of first-timers in AFIS, which is a more accurate reflection of the workload of fingerprint records on AFIS. The count for 2001, therefore, is more accurate than the estimates for 1997 and 1999.

^m Arrest information for older records was entered from final dispositions that were not fingerprint-supported.

ⁿ Arrest information is entered from final dispositions, which are not supported by fingerprints; booking fingerprints are occasionally unusable for comparison.

^o Historic data are now included in the computerized criminal history (CCH) system that were previously separate.

^p Arrest information is entered from final dispositions and criminal summonses that are not supported by fingerprints, compliance with State law regarding submission of fingerprints.

^q Arrest information is entered from final dispositions and criminal summonses, which are not fingerprint-supported.

^r Massachusetts has a bifurcated process in which case and disposition data are reported directly to the Criminal History Systems Board and fingerprint cards and arrest data go directly to the State Police.

^s The increase in volume is due to livescan and fingerprints submitted for identification purposes only.

^t Figure includes felony and most misdemeanor arrest cards.

^u With few exceptions, most unsealed arrest events are supported by fingerprints.

^v Reported case dispositions that can be linked to a record but not an arrest event are not fingerprint-supported.

^w There is no integration between AFIS and CCH.

^x State law and/or policy does not require arrest information to be supported by fingerprints and arrest information is entered from final dispositions, which are not supported by fingerprints.

^y Fingerprints retained by Forensic Bureau.

Table 6: Arrest records with fingerprints, 1997, 1999, 2001, and 2003

State	Number of arrest fingerprint cards and livescan images submitted to State criminal history repository				Percent change 1997-1999	Percent change 1999-2001	Percent change 2001-2003	Percent of arrest events in State criminal history files that are fingerprint-supported			
	1997	1999	2001	2003				1997	1999	2001	2003

Explanatory notes for Table 8

The notes below expand on the data in Table 8. The information was provided by the respective respondent.

Note: Percentages and numbers reported are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. Except for Puerto Rico, for which corrected data were submitted, the data in the columns for 1997 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1997* (April 1999), Table 8. Except for Puerto Rico, for which corrected data were submitted, the data in the columns for 1999 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1999* (October 2000), Table 8. Except for Puerto Rico, for which corrected data were submitted, the data in the columns for 2001 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 2001* (September 2003), Table 8.

... Not available.

NA Not applicable.

^a Based on audit sample of one jurisdiction.

^b Actual total number of cases declined by prosecutors is unknown; therefore, percentage cannot be determined.

^c The State repository only records the number of dispositions received by courts. Since the actual total is unknown, the percentage cannot be determined. The number of dispositions received for 2001 was 52,637.

^d The percentage rate for 2001 was higher due to our recordkeeping system. This information was not separated until 2003. The current percentage rate is correct.

^e The repository received notice of 6,597 cases. However, we are not aware of how many cases are not reported to us. Through current monitoring procedures, we estimate the number of delinquent prosecutor disposition cases existing on the system as approximately 16,039. It is unknown how many of these are actual decisions not to prosecute. This situation is compounded by the fact that the largest prosecution agency in the State does not actively enter information on a timely basis into the repository.

^f Through monitoring procedures, the number of delinquent prosecutor dispositions existing on the system is 6,800. It, however, is unknown how many of these are actual decisions not to prosecute. This situation is compounded by the fact that the largest prosecution agency in the State does not actively submit information on a timely basis to the repository.

^g The State received notice of 7,846 cases; however, the number of cases not reported is unknown. Through current monitoring procedures, the number of delinquent prosecutor dispositions existing on the system is estimated to be 9,082. It is unknown how many of those are actual decisions to prosecute. This situation is compounded by the fact that the largest prosecution agency in the State does not actively submit information on a timely basis to the repository.

^h The percentage is based on the number of 1997 felony arrest charges that have a final disposition. It is not known how many of those missing final dispositions are still active cases.

ⁱ This percentage is based on the number of 2001 felony arrest charges that have a final disposition. The number of 2001 felony arrests with final dispositions has remained about the same as 1999 (13,000); however, the overall number of arrests has increased by about 10 percent. Due to this increase, the courts are experiencing a larger felony caseload and may be taking longer to report dispositions. Delinquent dispositions are actively monitored and researched by the criminal history repository. The 2001 percentage includes active cases which are counted as unreported until a final disposition has occurred and has been posted in the database.

^j This percentage was based on the number of 2003 felony arrest charges that have a final disposition. It is not known how many of those still missing final dispositions are still, in fact, active cases. Therefore, the percentage represents the worst-case scenario.

^k This agency receives all felony court dispositions but for those transactions that do not have an ATN, the information is not being associated with an individual's record within the CHRI. We are in the process of developing an electronic solution to identify these transactions to perform a clean-up of the data.

^l Seventy-one percent of 1999 arrests have dispositions recorded.

^m Nolle prosecutions – 3,559, Not filed – 13,345.

ⁿ Felony cases dispositions entered in 1997.

^o Currently, 45% of 1999 arrests have final dispositions reported. When the current backlog is processed, the reporting level will increase.

^p A backlog of dispositions, which are to be reported by the courts, currently exists.

^q There were 104,620 arrests that Missouri received prosecutor actions on.

^r Montana Code Annotated specifies that the arresting agency is required to notify the repository when charges are not filed. The State does not govern the prosecutors; therefore, statistics are not available for this question.

^s Received 8,992 felony dispositions in 2003; do not know what percentage of total dispositions that constitutes.

^t Prosecutor declinations are reported as part of court dispositions; therefore, they are not reported separately.

^u All actions, including prosecution actions, are reported as final dispositions to the Administrative Office of the Courts.

^v Prosecutor declinations are reported as part of court dispositions; therefore, they are not reported separately.

^w Dispositions of all cases are reported by the Administrative Office of the Pennsylvania Courts, with no separation of felony versus other grades of offenses.

^x Due to discrepancies, however, only 90% could be posted.

^y There is no reliable way to measure what was not sent to the State; hence, an accurate percentage cannot be calculated.

^z Percentage is estimated based upon the number of arrests received at the State criminal history repository.

^{aa} Tracking of disposition reporting is not broken down by misdemeanor and felony offenses. Overall disposition reporting for 2003 will not be available until the end of 2004.

^{bb} During this time period, 2,038 declinations were received.

^{cc} Reporting is not required by law, but some dispositions are voluntarily submitted.

^{dd} Due to computer conversion and no report writing ability at this time, percentage is unknown.

Explanatory notes for Table 9

The notes below expand on the data in Table 9. The information was provided by the respective respondent.

... Not available.

- = 1 Record is destroyed by State criminal history repository.
- 2 Record is retained with action noted.
- 3 Record is sealed.
- 4 No action is taken.
- 5 Other.

^a This can be approved by Attorney General.

^b Records are destroyed or delivered to the person.

^c Treated as nonconviction.

^d Not a reportable event in Maryland.

^e Has occurred by court order.

^f Although State law does not provide for expungement of convictions, the repository receives orders issued pursuant to the courts' inherent authority.

^g All records have been deleted from MJIC database; however, MJIC is authorized to maintain an internal record of action in some cases.

^h Montana removes the information from the file and from the automated system. However, hard copies of the documentation received, as well as a copy of the record, are maintained for a period of 5 years in a filing cabinet.

ⁱ Noted on CHRI.

^j Sealed with action noted.

Explanatory notes for Table 10

The notes below expand on the data in Table 10. The explanatory information was provided by the respective respondent.

Note: The figures in the columns represent the estimated percent of fingerprint cards received from State prisons and local jails both in States where a legal requirement (State statute or regulation) exists to fingerprint incarcerated individuals and send the fingerprint to the repository and in States where the procedure is carried out voluntarily. The absence of a response indicates that the information is neither mandated by a State legal requirement nor is voluntarily submitted. Percentages are rounded to the nearest whole number.

... Not available.

^a In Connecticut, admitted prisoners are held only in State prisons.

^b The Montana State Prison and the Montana Women's Prison submit 100% of all of their inmates. Individuals that are assigned to the Department of Corrections for prerelease centers, intensively supervised probation, or boot camp are not submitted to the repository.

^c North Carolina does the positive identification before submitting to repository.

Table 10: Fingerprinting of incarcerated offenders and linkage to records maintained by State criminal history repository, 2003

State	Law requires fingerprinting of admitted prisoners and sending fingerprints to State repository		Percent of admitted prisoners for whom State repository receives fingerprints		State repository uses fingerprints to make positive identification and to link correctional data with proper records

Explanatory notes for Table 11

The notes below expand on the data in Table 11. The explanatory information was provided by the respective respondent.

Note: The figures reported in this table are from States in which there is a legal requirement (State statute or regulation) that probation/parole information must be reported to the State criminal history repository or from States where the information is voluntarily reported. The absence of a response indicates that the State neither statutorily mandates that the information is reported nor is the information voluntarily reported. See Table 5 for States that have a legal requirement that probation/parole information must be reported to the repository. Percentages reported are the results of estimates. Percentages are rounded to the nearest whole number. Except for Arizona, Massachusetts, and Washington, for which corrected data were submitted, the data in the columns for 1997 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1997* (April 1999), Table 11. Except for Arizona, for which corrected data were submitted, the data in the columns for 1999 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1999* (October 2000), Table 11. The data in the columns for 2001 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 2001* (September 2003), Table 11.

... Not available.

NA Not applicable.

^a Beginning in 2002, a new system was implemented which provides 100% reporting.

^b Probation information is no longer added to the criminal history system. It is directly added to the supervised release file by local agencies. Currently, 32 counties enter data into the supervised release file, and some do not enter all probation actions. Accordingly, the percentage of total probation actions cannot be determined.

^c 100% of probation data are entered directly by agencies to the supervised release file.

^d 100% of all California Youth Authority probations/paroles are entered into the supervised release file.

^e Probation information is maintained on the hot files, not within the State criminal history repository.

^f Eleven out of 13 supervision agencies currently report information.

^g No probation or parole data have been received. The Department of Corrections was unable to send data due to a software problem.

^h The State repository receives information on admissions to, but not releases from, probation.

ⁱ There is no system to report this information.

^j Probation sentences are reported; probation releases are not reported.

^k The percentage reflects the data reported directly to the State repository; however, there is a link to the parole and probation system maintained by the Department of Criminal Justice.

Explanatory notes for Table 12

The notes below expand on the data in Table 12. The explanatory information was provided by the respective respondent.

Note: Numbers and percentages have been rounded to the nearest whole number. Numbers of unprocessed or partially processed fingerprint cards have been rounded to the nearest 100.

... Not available.

NA Not applicable.

^a Arrests are entered by arresting agency, often before fingerprints are received.

^b Strictly for livescan submissions only.

^c Electronic/livescan submissions entered in 1 day.

^d Arrest data are entered directly into the central repository of criminal history information (OBTS/CCH) under a temporary SID. Upon positive identification by fingerprint comparison, the arrested offender is assigned a new or existing SID appropriately.

^e Criminal justice agencies request an Arrest Tracking Number (ATN) when charges are initiated so arrest information is known immediately to the CHRI since it is the system that generates ATNs. However, the arrest information is not available for dissemination until receipt of support documents. The receipt of hard copy fingerprint cards are generally between 10 to 14 days, unless received via livescan, which occurs at time of arrest.

^f The arrest data are entered into the CHRI upon receipt of the support documents (fingerprint card, warrants, or USACs). Data entry is usually completed for fingerprint cards within 5 workdays or less, for all other documents, usually 3 workdays or less.

^g This applies to 70% of the arrests.

^h Approximately 68% of arrests are instantaneous. Nonautomated arrest data takes approximately 30 days.

ⁱ This statistic does not account for a minority of arrests where fingerprints are not taken.

^j State has two livescan devices that submit electronically to the repository. One machine is used strictly for civil processing. The other machine is used by a law enforcement entity for submission of all Sexual and Violent Offenders, as well as civil submissions. State has recently signed a contract with Cross Match Technologies that provides for 11 devices throughout the State of Montana. These devices will be installed by September 2004 and will be submitting electronically. The installation of these devices will account for approximately 70% of Montana's criminal arrests, correctional cycles, and Sexual and Violent Offender registrations.

^k This number refers to counties.

^l Provided there are no backlogs.

^m Of these, 25 are Pennsylvania State Police Stations.

ⁿ Fingerprints never received.

^o State has livescan sites statewide at law enforcement agencies; however, those sites are shared with a variety of agencies.

Table 12: Average number of days to process arrest data submitted to State criminal history repository and current status of backlog, 2003

State	Average number of days between arrest and receipt of arrest data and fingerprints	Average number of days between receipt of fingerprints and entry of data into:		Number of arresting agencies reporting arrest data by automated means	Percentage of daily arrests in State represented by arresting agencies reporting by automated means	Backlog of entering data into criminal database exists	Number of unprocessed or partially processed fingerprint cards	Number of person-days needed to eliminate backlog

Explanatory notes for Table 13

The notes below expand on the data in Table 13. The explanatory information was provided by the respective repositories.

Note: Numbers and percentages have been rounded to the nearest whole number. Numbers of unprocessed or partially processed court disposition forms have been rounded to the nearest 100.

... Not available.

NA Not applicable—no legal requirement mandates the reporting of the information to the State criminal history repository.

^a Received nightly.

^b This agency receives all felony court dispositions but for those transactions that do not have an ATN, the information is not being associated with an individual's record within the CHRI. Maine is in the process of developing an electronic solution to identify these transactions to perform a clean-up of the data.

^c Electronic submission – 1 day.

^d This number refers to counties.

^e Town and Village court dispositions.

^f All disposition information is reported to the Administrative Office of Pennsylvania Courts. They in turn, send the tapes to the Pennsylvania State Police.

^g State law requires this information to be reported in 30 days.

^h This number represents counties reporting by automated means.

Table 13: Average number of days to process disposition data submitted to State criminal history repository and current status of backlog, 2003

State	Average number of days between occurrence of final felony court disposition and receipt of data	Average number of days between receipt of final felony court disposition and entry of data into criminal history database	Number of courts currently reporting by automated means	Percent of cases disposed of in State represented by courts reporting by automated means	Backlog of entering court data into criminal history database	Number of unprocessed or partially processed court disposition forms	Number of person-days needed to eliminate backlog

Explanatory notes for Table 14

The notes below expand on the data in Table 14. The explanatory information was provided by the respective respondent.

Note: Numbers and percentages have been rounded to the nearest whole number. Numbers of unprocessed or partially processed custody-supervision reports have been rounded to the nearest 100.

... Not available.

NA Not applicable — no legal requirement mandates the reporting of the information to the State criminal history repository.

^a This requirement is currently waived due to technological issues.

^b 100% of all adult correction admissions are reported. 100% of all California Youth Authority status changes are reported.

^c 99% for status changes.

^d The priorities for Maine are to build records based upon inquiry, first-time arrests, and updates to already built records. A prior manual record only gets built, based on the priorities given, if there is an inquiry against the individual. When an individual is “brand new” to the repository, the automated record building is initiated when the State Bureau of Identification receives either an arrest fingerprint card or a Uniform Summons and Complaint (USAC).

^e Computer interface.

^f New York State Department of Corrections submits correctional data online.

^g Automated – 1 day, Manual – 5 days.

Table 14: Average number of days to process correctional admission data submitted to State criminal history repository and current status of backlog, 2003

Explanatory notes for Table 16

The notes below expand on the data in Table 16. The explanatory information was provided by the respective respondent.

Note: State repositories were asked to list all methods that may be utilized to link disposition information. Matching of several items of information may be used to confirm that the appropriate link is being made. Also, if information of one type is missing, repositories may look to other types of information contained on the disposition report.

* Method(s) utilized by the State repository for linking disposition information and arrest/charge information also permit the linking of dispositions to particular charges and/or specific counts.

^a Confirming initial disposition report and arrest fingerprints were done at the same time.

^b Date of Birth/Arresting Agency.

^c Docket number, or ORI.

^d CJIS case number.

^e ORI, FL SID#, FBI #, Sex, Race, DOB, SSN.

^f Yes, for those fully automated records.

^g Probation Central File (PCF).

^h Court docket numbers.

ⁱ Date of Birth, Reporting Agency ORI.

^j Disposition changes are linked to arraignment charges.

^k Date of Birth.

^l Social Security Number.

^m Correctional data are received from Virginia Department of Corrections.

ⁿ Agency ORI.

Table 16: Methods to link disposition information to arrest/charge information on criminal history record, 2003

Explanatory notes for Table 17

The notes below expand on the data in Table 17. The explanatory information was provided by the respective respondent.

Note: Numbers and percentages reported are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number.

... Not available.

* All data received can be linked.

^a Return disposition for clarification and enter identification information to another system.

^b Return documents to arresting agency to obtain arrest-fingerprinting cards.

^c All correctional information is not linked and entered as a stand-alone cycle.

^d Individual courts are not available. Total dispositions that could not be linked are 15.

^e For court data, hold in automated format and reran periodically for linkage.

^f The Hawaii Criminal Justice Data Center (HCJDC) does receive notices of final court dispositions through court judgments and automated interface records that cannot be matched to an arrest segment. This includes convictions for cases such as penal summons for which no booking occurred even after conviction, as provided by law. The actual number of missing cases is not available. The HCJDC does not currently receive correctional data.

^g Request original fingerprint card.

^h Fingerprints only.

ⁱ Nonfingerprint-based.

^j Goes to "Hold" table.

^k In cases where the repository receives a disposition from the court but has not received the arrest fingerprint card, a letter is sent to the arresting agency requesting the fingerprint card. In cases where the repository receives a correctional cycle fingerprint card but has not received the original arrest fingerprint card, the information is still entered into the criminal history system but is not linked to an arrest or court cycle.

^l Return disposition to contributor.

^m Create a "dummy" arrest segment with information from corrections and link it to the court segment.

ⁿ NCDDOC creates a cycle alone, no need for linkage.

^o Information returned.

^p Make more attempts to link disposition by using prison fingerprint in lieu of arrest fingerprint.

^q Search documents and then proceed to enter complete record.

^r Contact police department for prints.

^s Approximately 5% of final court dispositions received by the repository cannot be linked to arrest/charge information. Actual number not available.

^t The repository attempts to obtain arrest information for the dispositions in question, so the number of dispositions without arrest changes on a daily basis. The numbers reflect the total number of unresolved dispositions without arrests since 1994.

^u The repository requires the submission of a unique arrest tracking number in order to link a custody to an arrest. The prison system does not require that number to be reported at the times of receipt.

^v Enter disposition information in a "not found" queue – if arrest entered subsequently, they are linked.

^w Correctional information is submitted on fingerprint cards.

^x Correctional information posted as independent event.

^y If fingerprint card from facility is available.

Table 17: Procedure followed when linkage cannot be made between court or correctional information in the criminal history database, 2003

State	Create a "dummy" segment		Enter information without linkage to arrest/charge data		Enter no information without linkage		Estimated dispositions received which cannot be linked to arrest/charge information			
	Arrest assumed from court disposition	Court dispositions assumed from correctional data	From		From		Prosecutor dispositions	Final court dispositions	Correctional information

Explanatory notes for Table 17a

The notes below expand on the data in Table 17a. The explanatory information was provided by the respective respondent.

^a Three months after arrest.

^b If requested for a lawful purpose (as defined by State law).

^c Every 4 years.

^d Only if fingerprints accompanied the information.

^e Public inquiry access to court system (MEJIS).

^f One year.

^g Manual inquiry to law enforcement agency.

^h Thirty days or less.

ⁱ Montana's repository has the ability to generate a report indicating all arrests that are 30 days old for which dispositions are missing. The reports are sent to the courts periodically. After a court does not respond to two such requests, the information is requested from the prosecutor's office. Requests for missing dispositions are sent to the repository when legacy records are converted.

^j Six months.

^k Various audits.

^l One year and 1 month.

^m Only prior to court system automation in 1989.

ⁿ Two years or more.

Table 17a: Procedure followed to obtain missing dispositions, 2003

Explanatory notes for Table 19

The notes below expand on the data in Table 19. The explanatory information was provided by the respective respondent.

Note: Except for Missouri and Puerto Rico, for which corrected data were submitted, the data in the columns for 1997 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1997* (April 1999), Table 19. Except for Puerto Rico, for which corrected data were submitted, the data in the columns for 1999 are taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1999* (October 2000), Table 19. The data in the columns for 2001 were taken from Bureau of Justice Statistics, *Criminal Justice Information Policy: Survey of Criminal History Information Systems, 2001* (September 2003), Table 19.

^a All inquiries are logged; updates are limited to the last transaction.

^b Inquiries and responses only.

^c Seven agencies validated/audited.

^d Kauai Prosecutors (pilot) – November 1994, Kauai County – October 1995, Hawaii County – December 1996.

^e Kauai Prosecutors (pilot) – January 1993 - December 1993, Kauai County – January 1993 - December 1993, Hawaii County – January 1994 - December 1994.

^f The only quality control being performed at this time is random sampling by supervisors. Maine plans to implement a more formal procedure for quality control sampling using selectable criteria.

^g Audits are conducted on a running cycle.

^h Audits have now moved to a 3-year cycle. The next audit will cover July 2002-June 2005.

ⁱ Montana intends to re-establish a quality control unit in 2004. The unit ceased operation in June 2003.

^j Audit program under development.

^k 1993 was the last audit of the repository, but there are ongoing audits of contributing/user agencies.

Table 19: Audit activities of State criminal history repository, 1997, 1999, 2001, and 2003

- 8 Plan/strategy development
- 9 Task force/advisory group establishment
- 10 Tracking number implementation/improvements
- 11 Training seminars/policy and procedures manuals
- 12 Other

^a 5/03 3rd judicial district only (by repository).

^b Final results have not been received as of this date.

^c Attorney General's Committee on Integration.

^d There are no immediate plans for data quality audits of repository's criminal history records. The State has experienced severe budgetary cutbacks, which resulted in reductions in the data processing resources available at the HCJDC. Subsequently, the State was no longer able to retain the data quality audit program undertaken in 1994-1995.

^e Missing disposition research; additional electronic interfaces with user agencies.

^f Applicant submission process (i.e. rejects).

^g Recommendations made to improve results.

^h (2) Validation edits, new interfaces, (5) Interface between CHRI and Omnitrack 8/2005.

ⁱ Quality Edit Team.

^j Statute table standardization.

^k Automatic notification to law enforcement agencies when unsupported court dispositions are received.

^l In February 2003, the repository brought up its electronic interface to the Western Identification Network (WIN) as well as an electronic interface with the FBI. This allows Montana to submit criminal and civil fingerprint cards to both agencies electronically, thereby reducing the number of times the cards are manually input. The State signed a contract with CrossMatch Technologies allowing the installation of 11 livescan devices throughout Montana that will have interfaces between the local booking system, the State, WIN, and the FBI. These devices will be installed by September 2004. An Operational Impact Group has been established that includes members from the Department of Justice and Department of Corrections, as well as local law enforcement entities. The State has also established some training seminars and will be adding additional training services. In October 2003, an internal policy and procedure manual was completed; a guide for local law enforcement entities is in the process of being rewritten. The State anticipates establishing a charge tracking number by the summer of 2006 that will enable better tracking of arrest and disposition information. A Quality Control Unit that will conduct audits will be re-established.

^m Cooperative format with Attorney General, prosecutors, and municipal agencies.

ⁿ Distribution of standard practices manual and statewide directory of criminal justice agencies.

^o Consultant review and recommendations.

^p In the beginning stages of looking at possible changes and improvements.

^q Random.

^r Justice information sharing to automate data flow.

Table 20: Data quality audits of State criminal history repository, 2003

State	State criminal history repository database audited for completeness within last 5 years	Date of last audit	Period of time covered by audit	Agency that performed audit	Changes to improve data quality were made as a result of audit *	Data quality audits planned or scheduled for next 3 years	Initiatives underway to improve data quality*

Explanatory notes for Table 22

The notes below expand on the data in Table 22. The explanatory information was provided by the respective respondent.

NA Not applicable.

^a A pilot project is underway in Fairbanks, waiving the name search fee for volunteers.

^b The Arkansas State Police does not conduct fingerprint-based searches at this time.

^c The same fee schedule applies for volunteers, except that volunteers for nonprofit agencies who work with children are exempt from paying fees for criminal history record information. In addition, there is a public access facility available to the general public at the central repository, the main county police stations, and the Hilo District Court through which conviction information can be viewed at a terminal free of charge or a hard-copy printout provided for a \$10 fee per offender.

^d Automated \$12.

^e Discounted fee for agencies conducting record checks on persons providing care to children, the elderly, and the disabled.

^f For Maine individuals and/or business entities, if they subscribe to the State's Website (annual subscription fee), the fee cost is reduced from \$25 to \$15. As of October 2004, SBI has received 259,620 record requests; 88% of these requests are received and returned electronically either through the Maine Telecommunications and Radio Operations (METRO) system for criminal justice agencies or the Internet for the public at www.maine.gov.pcr. For the week ending October 2, 2004, SBI received a record 8,357 requests for that week. When SBI managed a mostly manual system, a high-volume week was 3,200 per week.

^g \$8 for subject or charitable nonprofit.

^h Only for charitable nonprofits.

ⁱ Civil name check program users.

^j \$12 nonretained, \$15 retained.

^k Fee waived if certain criteria are met – tax exempt, provides one-on-one mentoring or tutoring for youth, dependant, or elderly person.

^l \$8 for charitable nonprofit organizations.

^m \$10 written, \$1 electronic.

ⁿ \$2 – Nonprofit, \$5 – Government, \$13 – All others.

Table 22: Fees charged by State criminal history repository for noncriminal justice purposes, 2003

Methodology

This report is based on the results from a survey conducted of the administrators of the State criminal history record repositories in May–December 2004. A total of 53 jurisdictions were surveyed, including the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and the U.S. Virgin Islands. Responses to the survey were received from all 53 jurisdictions.

The survey instruments consisted of 42 questions, having several parts. The survey was designed to collect comprehensive data relating to State criminal history information systems. Fifteen topical areas are covered in this report, as follows:

- current quality and quantity of records in the criminal history databases;
- level of automation of master name indexes and criminal history records maintained by the State repositories;
- capacity of criminal history system to flag convicted felons in the database;
- level of fingerprint-supported arrest reporting to the State repositories and the processing and timeliness of the information that is entered into criminal history record databases;
- notice to the State repository of persons released without charging following submission of fingerprints to the State repository;

- level of prosecutor-reported information in criminal history databases;
- level and timeliness of disposition reporting by the courts to the State criminal history repositories;
- types and timeliness of information reported to the State criminal history repositories by State and local correctional facilities;
- level of probation/parole-related information in State criminal history databases;
- extent to which the records in State criminal history databases contain final disposition information;
- policies and practices of the State repository regarding modification of felony convictions;
- ability of the State repositories to link reported disposition data to arrest data in State criminal history record databases;
- level of audit activity in the States and the strategies employed by the State repositories to ensure accuracy of the data in the criminal history record databases;
- participation of the States in III and NFF; and
- fees charged by State criminal history repositories for conducting record searches for noncriminal justice requesters.

The FBI also provided information for the report. The information includes the number of criminal history records of the States participating in the Interstate Identification Index (III) system that are maintained by the State criminal history repositories and the number of III records maintained by the FBI for the States.

Numbers and percentages shown in the tables were rounded. In most cases, numbers were rounded to the nearest 100. Percentages were rounded to the nearest whole number.

In the analyses of the tables, averages and totals were calculated using the mid-point of the range where ranges appear in the underlying data. In instances where the result is .5, when it followed an even number, the number was rounded down to the even number (e.g., 4.5 became 4); in instances where the .5 followed an odd number, the number was rounded up to the next even number (e.g., 1.5 became 2).

Data reported for 1997 was taken from Bureau of Justice Statistics, *Survey of Criminal History Information Systems, 1997* (April 1999). Data reported for 1999 was taken from Bureau of Justice Statistics, *Survey of Criminal History Information Systems, 1999* (October 2000). Data reported for 2001 was taken from Bureau of Justice Statistics, *Survey of Criminal History Information Systems, 2001* (September 2003).
